DEC			

What types of events are they?

Connectathons

A HL7 FHIR Connectathon is a collaborative event, usually focused on developing FHIR specifications for specific healthcare use cases and can include the development of profiles, resources, operations, implementation guides, and workflows. Connectathons are essential in the FHIR Community, as they enable all healthcare organisations (government entities, software vendors, peak organisations and others), to come together in one location to test, discuss and validate if their product's data-exchange capabilities are interoperable with other products either in use or in development in the healthcare market. As a key step in the Standards Development Process, Connectathons will also be featuring the latest presentations on Australian and international interoperability and standards trends in healthcare.

Webinars

HL7 Australia webinars allow members and other FHIR experts to have online real-time information sharing conversations about the latest FHIR trends. In addition, webinars will be held post international HL7 webinars to inform the Australian cohort with the most recent global trends, initiatives, and activities.

FHIR Meet ups

FHIR meet ups are a series of in person meet ups for Health IT developers, analysts, architects, innovators, and entrepreneurs. FHIR meet ups will be held in every state within Australia and will be hosted by HL7 Australia members, vendors, government, and industry.
